**The Revolutionary
Multilift XR4 and XR5 –
Higher Capacity & Longer Bodies**

MULTILIFT XR

Multilift XR4 / XR5

XR4N (Normal Length)

9,000 lb. capacity
10 – 11 ft. containers
50 degree dump angle

XR5S (Short length)

12,000 lb. capacity
10 – 12 ft. containers
50 degree dump angle

XR5N (Normal length)

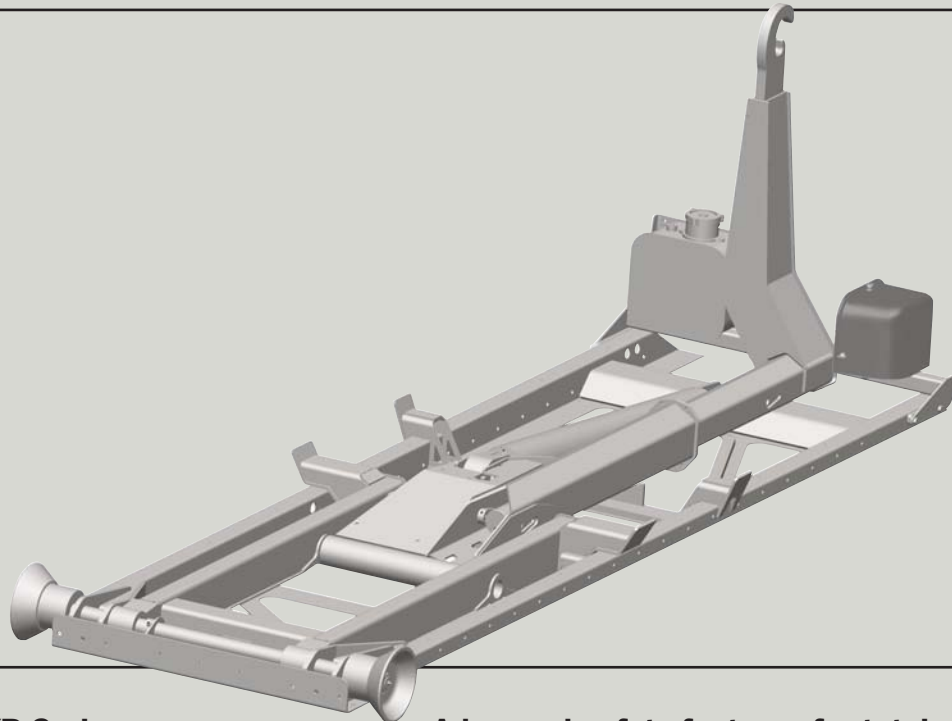

12,000 lb. capacity
11 – 14 ft. containers
50 degree dump angle

XR5L (Long)

12,000 lb. capacity
12 – 15 ft. containers
50 degree dump angle

XR5XL (Extra Long)

11,000 lb. capacity
14 – 17 ft. containers
48 degree dump angle

The Revolutionary XR Series

The new XR 4/5 hooklift system is a major breakthrough in Multilift technology. This unique, pioneering concept is based on a sliding hook mechanism and innovative new single-plate subframe and asymmetric lifting frame designs. The result is a product that delivers outstanding performance with fast, easy body mount and demount functions. And that's not all. The XR range also brings you unrivalled levels of reliability and safety plus smooth, efficient, trouble-free operation.

The XR more than pulls its weight

The XR 4/5 hooklift has lifting capacities ranging from 4-1/2 to 6 tons, but in terms of productivity it more than pulls its weight. The main cylinder is centred for even distribution of forces. A lower operating radius during mounting and demounting makes the XR system ideal for use on low-height applications.

The XR Xtra Reliable

The exceptional low weight, high strength ratio gives greater payloads, increasing the versatility of the vehicle and maximizing loading. The system is fully compatible with older Multilift containers. Well-proven components and easy-to-use hydraulic systems and controls assure outstanding reliability. Maintenance and repairs are reduced to an absolute minimum. In short, the XR offers a rapid return on your investment, low cost of ownership throughout its extended working life and high resale values.

Advanced safety features for total peace of mind

Multilift never compromises on safety and the XR sets a new benchmark of excellence in this vital area. The well-proven Multilift construction incorporates a mechanically operated tipping lock and mechanical container locking. All hydraulic cylinders are fitted with load holding valves and a pilot-operated double check valve to support the load even if a hose should burst.

Advanced safety functions make it almost impossible for the operator to make a wrong move. Interlocks guarantee safe hydraulics operation. The direct electrical controls are simple to use, fast and accurate.

The off-centre location of the XR 4/5 lifting frame and hook arm provides excellent operator visibility to the hook and the lifting process, even through the rear window of the cab. And the new hexagonal profile of the lifting arm/hook arm ensures maximum stability and precision throughout each and every operation.

A commitment to quality

Multilift is totally committed to maintaining standards of quality that provide a benchmark of excellence for the industry. Our XR Hooklift systems are built to meet or exceed demanding European standards and fulfil EU machine directives.
