

HIAB REMOTE CONTROL RETROFITS

HIAB REMOTE CONTROL RETROFITS

With HIAB CLX, you already have the industry's best manual steering, with great lifting and loading performance that gives you truly efficient operation. However, it's possible to achieve still greater control over your crane. Today you can make your existing HIAB equipment easier to use, with better precision and added safety for your operators.

The solution is a retrofit with a HIAB XS Drive remote control system. Lightweight and ergonomic, they make every job go faster, so your fleet can be more productive than ever before. And because it's original technology from HIAB, you get all the performance you expect – and then some.

HIAB offers two retrofit remote control options to match the way you use your equipment. For cranes that are only used for hook operation, the extra compact XS Drive Lite consists of four levers with all the functionality you need. Cranes that require tool operation can meet higher demands with the six-lever standard XS Drive system.

Increased productivity

XS Drive Lite makes it easier than ever to control your HIAB crane. You steer the crane from the best possible vantage point for new levels of precision, and the simple controls ensure an ultra-quick and ultra-smooth response. Every job becomes quicker, allowing you to do even more.

Increased safety and comfort

Having the best point of view also means you can carry out work more safely. And that's just the beginning. In addition to being among the market's lightest remote controls, HIAB's XS Drive systems feature a truly ergonomic design that provides a more comfortable working environment. After long days with heavy loads, your back will thank you.

Increased autonomy

By switching to remote control, it's possible for just one person to do it all. A single operator can attach a load, handle it and deliver it from A to B without any added assistance or support. So your operators gain more than greater precision. They get greater independence.

Increased reliability

Only XS Drive systems are designed to transform CLX manually controlled cranes into radio remote controlled equipment*. Unlike other solutions on the market, there's no risk of incompatibility nor the need to adapt third-party technology to fit your crane. Like all HIAB equipment, it's built to perform specifically with your needs in mind.

* HIAB XS Drive and XS Drive Lite are designed only for CLX manual cranes and are not suitable for cranes produced by other manufacturers or for older HIAB models.
